Quin Richards

UX + Game Designer | Experience Designer

Los Angeles, CA
quinrdesign@gmail.com
linkedin.com/in/quin-richards
quinrichards.com

UX designer for games and interactive products. I play it, test it with real people, and turn what I find into ranked fixes and prototypes a team can ship. Most recently: playtests, HUD and game-feel UX on *Godzilla*, and the design system for Stellar's Profile platform.

EXPERIENCE

Digital Eclipse
2026 – PRESENT

UX Consultant (contract): *Godzilla: Destroy All Monsters Melee*, earlier *MK: Legacy Kollection*

- Ran UX on two online playtests (45 testers) and merged them into one ranked fix list for the design and ops leads.
- Benchmarked 10 rival launches to scope which online features had to ship day one, then proposed matchmaking that shows players their connection.
- Redesigned character select and the connection warning, and scored VFX and game feel against the GameCube original across 7 categories.
- Swept demo reviews into a top 5 issue list before launch. The game shipped Overwhelmingly Positive on Steam (96%).

Stellar
2026 – PRESENT

UX / Product Designer (contract)

- Designing the UI and design system for Profile, a freelance talent marketplace built on verified case studies instead of résumés, heading into an invite-only alpha.
- Took the team from several competing UI directions to one system they're building on now.
- Restructured navigation into four core tabs with Dashboard as home, so verification status and new opportunities greet people every visit.
- Designed the three-tier verification flow and its badge language, keeping people as the final say: "pending human review," never "AI-verified."

Apple
2026 – PRESENT

Specialist, Apple Store

- One-on-one setup and training on iPhone, Mac and accessories, often for people using them for the first time.
- A daily read on where real people get stuck with Apple's interfaces, which I bring straight back into my HI and UX work.

The Walt Disney Company
OCT 2025 – APR 2026

UX Designer & Rapid Prototype Engineer

- Spotted a workflow gap writers across Disney's creative banners were living with, and ran the research myself to confirm it.
- Designed the flows and built a working prototype to show the fix instead of describing it.
- Pitched it, and it was greenlit and company-backed within weeks of the first pitch.

Beamdown (Steam)
AUG 2024 – MAY 2025

Lead Designer

- Led design for a 30+ person team through a public Steam launch (87% positive), owning combat, boss and narrative direction.

Earlier: Program Coordinator & Broadcast Producer, University of Utah Esports (2022 – 2025). Research Team Lead, Riot Games student program (2018), turning player feedback into structured findings.

CASE STUDIES at quinrichards.com

Godzilla UX
Playtest synthesis, HUD and character select redesigns, VFX review, launch feedback.

Cue
Eyes-free gesture and haptic language for headphones, with a 10-screen prototype and VoiceOver states.

Recruit Ops
Turns a 35-minute theme park queue into missions, with an iPhone and Duo version.

EDUCATION

University of Utah, B.S. Game Development, 2025
Santa Barbara City College, Psychology & Philosophy

HOW I WORK

RESEARCH	Playtests, usability testing, review sweeps, competitive audits
DESIGN	Flows, wireframes, game UI and HUD, interaction and haptics, design systems, accessibility
BUILD	Figma, Cursor, Unity, Unreal Engine 5, Miro, Jira
